Mr. Fisher:

At this point, a Remedial Investigation/Feasibility Study has not yet been done. We are currently working on an Administrative Order with the PRP to conduct this assessment. In addition, the PRP will be conducting a removal action that will remove all the materials left in the tanks and equipment as well as removing any visible soil contamination.

On a side note, this property is being leased to two companies that store oil.

I hope this is helpful. As you can see, something should be happening relative to the site in the next few months.

Thanks

Gary Moore

Subject: Falcon refinery site status

AM

Dear Mr. Moore:

I am interested in information concerning this site in Ingleside, Texas. The contact for this site Rafael Casanova has an email address and phone that seems to be defunct.

I am most interested in any adverse effects to the homes and people in that neighborhood due to the chemicals found in the soil on the site. Has this been addressed in the proposed study?

Thank you

Steve Fischer 361 -727-1700
